Personal Projects

1. Developed an end-to-end ML pipeline to forecast household electricity demand and detect abnormal consumption patterns.

Trained and evaluated 6 machine learning models, achieving accurate demand predictions and early identification of usage anomalies for smarter energy management.

2. Develop a Hospital Management System using C++

In that system user can Add, View, Update & Delete data.

3. Develop a mobile application for bakery using Android Studio

Designed UI for the application and user logins link with SQL lite

4. Develop a website using HTML, CSS, JavaScript and Bootstrap

Above facts are true and correct to the best of my knowledge
